

TotalTime

Low cost proximity card clocking in system

Complete plug n play clocking system, ready to work straight from the box

-  Extremely cost effective, complete clocking system to control employees hours and reduce lateness.
-  Employees clock in and out by simply holding their proximity card in front of the clocking terminal. Being non-contact, these have proven to be easier to use and much more reliable than magnetic swipe cards.
-  RFID proximity card, key fob or PIN number clocking.
-  Comprehensive software calculates employees' hours and overtime according to your working patterns saving you time and money.
-  Graphical holiday, sickness and absence planning allows you to manage who is away and when, ensuring too many employees are not away at the same time.
-  Expanded report suite with detailed and summary reports.

Clocking data is collected via WiFi network or via USB

View and edit employee information on screen

Produce reports to print or export to a file

Export payroll data to your Sage payroll package

Complete proximity card clocking in system boxed package

Totaltime is an extremely cost effective clocking solution designed to monitor the working hours of your employees. It is powerful yet user friendly and is ready to work straight from the box.

Employees clock with a robust non-contact, RFID proximity card or key fob which can be reused when an employee leaves. PIN number clocking option now built in. The TotalTime software then automatically calculates each employees working hours based on your working schedules or shifts. The user friendly software allows you to view everything on screen and edit data as required, before printing or exporting reports or exporting into a payroll package such as Sage Payroll.

The TotalTime clocking terminals can be located at remote sites and send there data back to you through the internet, allowing you to stay in control of your employees' time and attendance at all times.

The TotalTime clocking terminal

Large graphical display shows date, time and employee name when clocking with audible confirmation.

Simple operation, employees clock with a robust non-contact proximity card, which can be reused when an employee leaves.

Downloads via WiFi, TCP/IP Network connection or USB and will store up to 200,000 records.

Can operate a bell or siren to signal shift start, stop and break times. (weekly schedule can be set with different times on different days. (Siren / bell sold separately
